EDUCATION

- **Vellore Institute of Technology, Chennai** 2022 – Present
Bachelor of Technology in Electronics and Computer Engineering CGPA: 9.23
- **Senior Secondary Education (CBSE)** 2022
Central Board of Secondary Education Percentage: 89.8

EXPERIENCE

- **Embedded Systems Trainee (Cohort 3) – Infineon Technologies** Sep 2025 – Dec 2025
 - Completed a rigorous, industry-designed embedded systems training program conducted by Infineon engineers, focused on **bare-metal firmware development**.
 - Developed **embedded bare-metal firmware** for an **ARM Cortex-M0+ microcontroller** (Infineon PSoC 4100S Plus), implementing **GPIO, TCPWM timers, PWM, SAR ADC, and interrupt handling** at register level
 - Built and debugged the complete firmware stack by designing **startup code, linker scripts, and Makefile-based builds** using the **GCC toolchain**, and debugging with **GDB and OpenOCD** to analyze memory maps, stack usage, and **interrupt execution flow**
- **Embedded Systems Intern – DRDO (Gun Health Monitoring System)** May 2025 – Jun 2025
 - Developed real-time embedded firmware for acquisition and diagnostics of weapon subsystem signals
 - Implemented low-level embedded firmware on the **NXP MPC5674F** using **S32 Design Studio**, configuring **eQADC, DMA-driven eSCI (UART), FlexCAN, PIT timers, system clocks, NVSRAM**, and **interrupt routines** for deterministic multi-channel data acquisition
 - Verified **interrupt timing** and **ADC sampling behavior** by instrumenting firmware with GPIO toggles and validating delays using **oscilloscope**-based signal probing

PROJECTS

- **Auto Street Lamp Control System – Infineon Hackathon (3rd Place)** Dec 2025
GitHub: <https://github.com/hrsas/Infineon-Hackathon>
 - Implemented **LDR-based illumination control** with progressive activation of **9 LEDs** for day-night simulation
 - Designed a **multi-rate bare-metal firmware** on the **Infineon PSoC 4100S Plus** using dual **TCPWM timers** to decouple **ADC sampling (1 kHz)** from **LED control updates (100 Hz)**, with interrupt-driven control and deterministic clock configuration
- **Bare-Metal Analog Joystick** Dec 2025
GitHub: <https://github.com/hrsas/psoc4100sPlus-baremetal-analog-joystick>
 - Implemented a **game controller** by converting potentiometer position into discrete LEFT/RIGHT control commands and transmitting them to a PC game over **UART**
 - Implemented a **timer-driven bare-metal firmware** on the **Infineon PSoC 4100S Plus**, configuring **SAR ADC, TCPWM interrupts, GPIO routing, and SCB UART** via register-level programming
- **Wearable Fitness Watch** Jan 2025 – May 2025
GitHub: <https://github.com/hrsas/SmartFitnessWatch>
 - Built and programmed an **ESP32-based** embedded fitness tracker for heart-rate monitoring, step counting, and workout tracking
 - Integrated **MPU6050 IMU** and **MAX30102** heart-rate sensor; implemented **dynamic threshold calibration**, significantly improving motion-detection consistency and repetition-count reliability

CERTIFICATIONS

- **Etalvis Certifications:** C Programming Foundation, Electronics Foundation, Embedded Hardware, Embedded Software (GPIO, Controller), Microprocessors Internals, ARM Foundation

Certificates: [Drive Link](#)

ACHIEVEMENTS

- **3rd Place - Infineon Embedded Systems Hackathon** Sep. 2025 - Dec. 2025
- **Top-5 Finalist out of 1000+ teams** at DVCon India 2025 Feb. 2025 - Aug. 2025

TECHNICAL SKILLS

Embedded Systems: ARM Cortex-M, Interrupt Handling, Timers, PWM, ADC (SAR, eQADC), DMA, UART, SPI, I²C, CAN

Programming: C, Embedded C, C++

Tools: GCC Toolchain, Linker Scripts, GDB/OpenOCD, S32 Design Studio, Git, Linux
